

Financial Pack

Kitchen output, monthly P&L projection, savings case & sensitivity — prepared from the equipment schedule and covers model captured in one first meeting.

PROJECT REF JRT-2026-AGL-01	PREPARED FOR Auntie Gaik Lean's Old School Eatery, Bishop Street, George Town
PREPARED BY JR-Tech Solution Sdn Bhd x TechNext	DATE 4 July 2026
REVISION R1	STATUS SAMPLE — illustrative figures

Contents

01 Normal-day kitchen output — covers, throughput, revenue build-up	Sheet 2
02 Monthly P&L projection, 12-month ramp & break-even	Sheet 3
03 Savings case — JR-Tech kitchen vs typical kitchen	Sheet 4
04 Sensitivity, assumptions & acceptance	Sheet 5

Basis of preparation. The restaurant seats 48 across a lunch and dinner service, closed Mondays (26 operating days/month), with a blended average check of RM95. The proposed kitchen is 55 m² with an equipment and fabrication investment of RM185,000 and a JR-Tech recurring service programme of RM2,980/month. All projections derive from the signed-off menu anchors (Curry Kapitan, Perut Ikan, Gulai Tumis, Jiu Hu Char, Chap Chye, Otak-otak, Kerabu Bee Hoon, Cendol) and the equipment schedule in the Blueprint Pack. Figures are modelled estimates for demonstration, validated at commissioning against metered actuals.

SECTION 1 **Normal-day kitchen output**

A normal operating day at Auntie Gaik Lean runs two services from a 48-seat heritage dining room. The covers model is built daypart by daypart from the seating plan and the Nyonya menu mix agreed in the first meeting.

130

covers on a normal day

RM 12,350

normal-day revenue

RM 95

blended average check

85%

peak utilisation — wok line (the constraint)

Covers by daypart — normal day (closed Mondays)

DAYPART	SERVICE WINDOW	TURNS	SEATS	COVERS	AVG CHECK	REVENUE
Lunch	12:00 – 14:30	1.15	48	55	RM 92	RM 5,060
Dinner	18:00 – 21:30	1.56	48	75	RM 97	RM 7,275
Normal-day total				130	RM 95	RM 12,335 ≈ RM 12,350
Monthly, at 26 operating days				≈ 3,380	—	≈ RM 321,100 / month

Kitchen throughput — dinner-peak demand vs station capacity

At 2.6 dishes per cover (sharing-style Nyonya service), the 19:00–20:15 dinner peak asks roughly **110 dishes/hour** of a 55 m² kitchen. Slow-simmer anchors (Perut Ikan, Gulai Tumis, Chap Chye) are batch-held from afternoon prep, so the à-la-minute load concentrates on the wok and fry stations.

STATION	KEY EQUIPMENT (FROM SCHEDULE)	PEAK DEMAND (DISHES/HR)	RATED CAPACITY (DISHES/HR)	UTILISATION	STATUS
Wok / induction range	2 × 12 kW induction woks (Curry Kapitan, Jiu Hu Char, Kerabu toss)	44	52	85%	Constraint
Simmer / stockpot	Induction stockpot + 4-zone hob (Perut Ikan, Gulai Tumis, Chap Chye holds)	28	44	64%	Headroom
Grill / steam	Smokeless grill + steamer (Otak-otak)	16	28	57%	Headroom
Cold kitchen / dessert	Prep counters, chiller, cendol station	22	40	55%	Headroom
Total pass output	—	110	164	67%	Balanced

Dinner carries the day — by design

Dinner delivers 59% of a normal day's revenue on 58% of the covers. The kitchen is engineered around the 19:00–20:15 peak; the wok line is deliberately the constraint at 85%, because rempah-heavy simmer dishes are batch-produced in the afternoon and only regenerated at service — flattening the peak without a third wok in a 55 m² heritage footprint.

Loaded into Odoo: this daypart model becomes budget lines and Planning demand curves, so post-opening POS actuals are compared to this exact projection.

SECTION 2 **Monthly P&L projection, ramp & break-even**

Steady-state month = 26 operating days × RM12,350 ≈ **RM 321,100**.

Electricity is computed from the equipment schedule itself: 38 kW connected load × diversity × 10.5 operating hours ≈ 158 kWh/day → ≈

4,100 kWh/month × RM 0.46/kWh (blended TNB commercial tariff).

Monthly restaurant P&L — steady state (base case)

LINE	BASIS	RM / MONTH	% OF REVENUE
Revenue	130 covers/day × RM95 × 26 days	321,100	100%
Food cost	32% — fresh fish, prawn, belacan-grade produce; rempah made in-house	(102,750)	32.0%
Kitchen labour	7 kitchen staff: head chef, 2 wok, 2 prep/rempah, kueh & dessert, steward	(26,600)	8.3%
Service labour (FOH share)	Floor team for a 48-seat two-service room	(34,800)	10.8%
Electricity	≈ 4,100 kWh × RM 0.46 — from equipment-schedule loads	(1,886)	0.6%
Gas (LPG)	Residual only — stockpot backup burner; induction-led design	(1,350)	0.4%
Chemicals	JR-Chemical subscription: dishwasher, degreaser, sanitiser	(1,800)	0.6%
JR-Tech maintenance contract	Preventive programme, SLA-backed (Handover Pack \$2)	(1,180)	0.4%
Rent	Heritage shophouse, Bishop Street (estimate, owner-confirmed band)	(14,000)	4.4%

Depreciation	RM 185,000 kitchen investment, straight-line 7 years	(2,202)	0.7%
Other operating	Insurance, card fees, waste, smallwares, marketing	(12,800)	4.0%
Operating profit	—	121,732	37.9%
EBITDA	Operating profit + depreciation	123,934	38.6%

A Michelin-recognised name with a RM95 check and a 48-seat room runs a premium margin structure; the model is deliberately stated pre-tax and before owner's drawings.

12-month ramp & break-even

Break-even in month 3 (base case)

The re-opening after the kitchen rebuild ramps from a dinner-led soft launch: month 1 opens at $\approx 37\%$ of steady state and reaches $95\%+$ by month 8. Fixed monthly costs (labour, rent, contracts, depreciation, overhead) total $\approx$ RM 98k; contribution per revenue ringgit after food cost and variable utilities is $\approx$ 66 sen — so the break-even revenue line sits at $\approx$ **RM 148k/month**.

SCENARIO	STEADY-STATE REV/MO	BREAK-EVEN
Conservative covers -15%	RM 273k	Month 4
Base	RM 321k	Month 3

Strong covers +12%

RM 360k

Month 2

SECTION 3 Savings case — JR-Tech kitchen vs typical kitchen

Same 48-seat Nyonya menu, two builds: the JR-Tech design (smokeless induction wok line, heat-recovery dishwasher, demand-controlled hood, workflow-optimised 55 m² layout) versus a typical gas-heavy contractor kitchen. Loads are taken line-by-line from both equipment schedules.

METRIC	JR-TECH KITCHEN	TYPICAL KITCHEN	DELTA
Total connected electrical load	38 kW	55 kW (over-sized fixed-speed hood, resistive appliances)	-17 kW
Monthly consumption	≈ 4,100 kWh	≈ 7,690 kWh	-3,590 kWh (-47%)
Monthly electricity @ RM 0.46/kWh	RM 1,886	RM 3,536	- RM 1,650/mo
Kitchen headcount	7 (batch rempah/simmer workflow, one-pass layout)	8 (extra steward/prep head for longer paths and gas-wok cleaning)	-1 head ≈ - RM 2,400/mo
Maintenance downtime	0.5 day/quarter (preventive contract, induction = fewer moving parts)	2 days/quarter (reactive repairs, burner and pilot failures)	-6 lost days/yr ≈ - RM 74k lost-revenue risk/yr

RM 1,650

electricity saved / month

-47% kWh vs typical build

RM 2,400

labour saved / month (1 fewer steward/prep head)

workflow-optimised layout

RM 243k

modelled 5-year cumulative savings

≈ 1.3× the RM185k investment

An honest number, not a brochure number

Honesty note: these savings are **modelled estimates**, not guarantees — nameplate loads × diversity factors measured on comparable JR-Tech installations, current TNB tariffs, and Penang F&B wage benchmarks. They are validated at commissioning and then replaced by metered actuals in the Odoo dashboard: the kitchen sub-meter is read on every monthly JR-Tech maintenance visit.

At $(RM1,650 + RM2,400) \times 60$ months, the modelled 5-year total is **RM 243,000** — before counting the downtime avoided on a dining room where one lost day is ≈ RM12,350 of revenue.

SECTION 4 Sensitivity, assumptions & acceptance

Sensitivity — what moves the number

VARIABLE	LOW	BASE	HIGH	EFFECT ON MONTHLY OPERATING PROFIT
Covers	−20% (104/day)	130/day	+20% (156/day)	RM 78k · RM 122k · RM 165k
TNB tariff (RM/kWh)	0.40	0.46	0.55	+RM 246 · base · −RM 369 — and the JR-Tech vs typical electricity gap widens from RM 1,436 to RM 1,974/mo as tariffs rise
Average check	RM 85.50 (−10%)	RM 95	RM 104.50 (+10%)	−RM 21k · base · +RM 21k

Read-through: covers and check dominate; the energy case is robust in every scenario and improves under tariff inflation. Break-even stays inside month 4 even in the conservative case.

Assumptions register

#	ASSUMPTION	VALUE / SOURCE
A1	Operating calendar	Lunch + dinner, closed Mondays → 26 days/month
A2	Covers, normal day	55 lunch + 75 dinner = 130 (owner interview + queue observation)
A3	Average check	RM95 blended (RM92 lunch / RM97 dinner), current menu pricing
A4	Food cost	32% of revenue, in-house rempah, daily wet-market buying
A5	Electricity	≈ 4,100 kWh/mo from schedule loads × diversity; tariff RM0.46/kWh blended

A6	Kitchen investment	RM185,000 (equipment, fabrication, installation — Handover Pack \$3)
A7	Depreciation	Straight-line, 7 years, nil residual
A8	Recurring services	RM2,980/mo = maintenance RM1,180 + chemicals RM1,800
A9	Rent	Heritage shophouse estimate RM14,000/mo; to be confirmed by owner
A10	Kitchen area	55 m ² , single-floor back-of-house, 1.1 m back-lane access

Acceptance

Signing this sheet confirms the covers model, tariff basis and assumptions A1-A10 as the agreed baseline for the Odoo budget load and the commissioning validation.
